

ATF Main

1 The Main Method

```
module Main (main) where

import System.Environment
import Help
import Compile

main :: IO ()
main = do
  clargs <- getArgs
  case clargs of
    -- main commands
    "help" : []          -> help "all"
    "help" : topic : [] -> help topic
    "compile" : []       -> help "compile"
    "compile" : fn_lang : xs -> compile fn_lang xs
    -- other commands
    command : _ -> error $ "unrecognized command: " ++ command
    []          -> error "use 'atf help <topic>' for help"
```
